

CC300 ELECTRONICALLY CONTROLLED CATHETER CABINET

The CC300 Cath Cabinet is a hospital grade cabinet optimized for the functional storage of catheters in cardiac cath & EP labs and invasive radiology suites.

Catheters are stored on five mobile hook slides attached to an easy glide ball bearing slide allowing non-obstructed access to all catheters within the cabinet. Hook slides can be repositioned to allow for larger packaging.

Single door design with password protected electronic locks on door and drawers controlled by either a laptop computer mounted on a dual pivot articulating arm on the outside of the cabinet or standard CPU. A 17" flat panel monitor mounted on the arm provides visual display of contents of the cabinet and draws.

Simple inventory control program with optional interface to hospital inventory tracking system records what items are removed from the cabinet and what patient they were to be use for.

The software provides an audit trail of time, date and who accessed the cabinet.

- * Optional bar code scanner
- * Optional magnetic card reader.
- * Optional flat panel monitor
- * Optional drawer module with a choice of either two or four drawers.

Pharmaceutical, contrast media, syringes and other small items can be stored in optional plastic bins.

Ships fully assembled
